

Lo Lap Tak, Alex

Graduate of Associate of Science in Airport Operations and Aviation Logistics in 2005

Now working in Singapore's Changi International Airport

Three years ago when I decided which programme to choose, the Associate of Science in Airport Operations and Aviation Logistics (AOAL) was an entirely new programme. I still chose it because other than aviation and logistics, the programme also covers a lot in Information Technology, Business and Service Management, which prepares us for different kinds of posts in the Aviation and Logistics industries. After graduating from AOAL and obtained my bachelor's degree in AOAL's top-up program, I am now working at Changi International Airport in Singapore. What I have learnt from the AOAL programme not only has helped me to get a job but has also enhanced my learning capabilities. Now I have full confidence in taking on the challenges in my career!
