How to Measure and Compare Safety Performance of Railways?

By: Melody Khadem Sameni
Assistant Professor
School of Railway Engineering
Iran University of Science and Technology
Contents

• A bit about me and the railway education
• Some statistics on railway safety
• Why measuring is important?
• How to measure safety performance?
• Introduction to DEA and its applications
• Potential models
• Conclusions
Educational Background

- Got my PhD from University of Southampton (UK) in 2012
- Master in Systems Eng., Iran 2008
- Bachelor in Railway Eng., Iran 2002

- An absolute railway fan!
Human Resource Challenges of Railways

• “Ensuring that knowledge is passed on to the generation
• Developing workforce skills/capabilities
• Retaining valued talent”

(SIAFI and UIC, 2014)

• 5.6 million people directly work in railway companies that are members of UIC

(UIC, 2018)
Spectrum of Railway Education

• National Initiatives
• Railway focused Universities
• Railway Departments/Schools
• Railway Related Majors
• Railway courses/research at other departments
National University Rail Center in the USA

Consortium of seven partner colleges and in North America.

- Centre of Excellence in Digital Systems
- Centre of Excellence in Rolling Stock
- Centre of Excellence in Infrastructure

http://www.nurailcenter.org/  
https://www.ukrrrin.org.uk/  

The 3rd Workshop on Railway Operation for Safety and Reliability
China

- Beijing Jiatong University
- Changsha Railway University

Russia

- Moscow State University of Transport
- Petersburg State Transport University
- Ural State university of Railway Transport

Ukraine

- Kharkov State Academy of Railway Transport
• Railway Technical Research Institute (Japan)

• Korea Railroad Research Institute

• ...
• Department of Rail Vehicles and Transport Systems-RWTH Aachen University (Germany)

• School of Railway Engineering (Iran)

• ...

The 3rd Workshop on Railway Operation for Safety and Reliability
• Master's course in Infrastructure Engineering and Railway Systems

• Railroad Engineering Program
• Railway Systems Engineering and Integration (Master)
• Railway Safety and Control (Master)

• Railway Engineering (Turkey)
School of Railway Engineering

- Established in 1997 at Iran University of Science and Technology (IUST).
- Financial support for establishment from Iranian Railways.

Majors at the School of Railway Engineering

The 3rd Workshop on Railway Operation for Safety and Reliability
Railways in Iran

- Population: 80.5 million (18th in the world)
- Area: 1,648 thousand Sq m (17th in the world)
- GDP (nominal 2016): 425 Billion $ (25th in the world)

- Railways (According to UIC synopsis 2016)
  - Length of lines: 8576 km; Double tracks: 1900 km; Electrified lines: 181 km
  - Railway lines under construction: 4700 km
  - Tonne-km: 27 billion
  - Passenger-km: 12 billion
The 3rd Workshop on Railway Operation for Safety and Reliability
### Railways are safe but…

(European Commission, 2016)
Railways are safe but...

Significant Accidents and Fatalities in the EU (UIC, 2018)
Safety Performance of Railways in the EU

The 3rd Workshop on Railway Operation for Safety and Reliability (UIC, 2018)
What is the safest railway in the world? How to compare the safety performance of railways?
Different Levels of Safety Performance...

(UIC, 2018)
Different Levels of Safety Performance...

(UIC, 2018)
Different Levels of Safety Performance…

Figure 12a: All railway fatalities and suicide fatalities on railways (EU-28, Norway and Switzerland; 2011-2015)

(UIC, 2018)
Economic Impacts of Railway Accidents

(UIC, 2018)
Different Types of Railway Accidents

(UIC, 2018)
Why Measure?

– Part of Improvement Cycle

(Pyzdek, 2003).
UIC Global Safety Index

- Weighted number of accidents
- Created in 2015

(UIC, 2017)
UIC Global Safety Index

\[ GSI = \frac{1}{1000} \times \sum ((C_v \times C_n) + C_a) \times C_r \]

where:

- \(C_v\) is the coefficient for the category of victim, from 1 (a serious trespasser injury) to 8 (a passenger fatality);
- \(C_n\) is the coefficient for the number of victims, from 0 (no victim) to 5 (more than 5 victims);
- \(C_a\) is the coefficient for the type of accident, from 1 (a person hit by a train) to 7 (a derailment or a collision between trains);
- \(C_r\) is the coefficient for the cause, from 1 (external causes) to 2 (internal causes).

(UIC, 2017)
Index Number Problem

“complex that is made up of individual measurements for which no common physical unit exists” (Frisch, 1936)

• Derailment per million train-km??
• Fatalities per million passenger-km??
• Total number of accidents per million train-km??
• …??
Data Envelopment Analysis Model (DEA)

\[
\max h_o = \frac{\sum_{r=1}^{s} u_r y_{ro}}{\sum_{m} v_i x_{io}} \\
\sum_{r=1}^{s} u_r y_{rj} \leq 1 \quad j = 1, \ldots, n \\
\sum_{i=1}^{m} v_i x_{ij} \\
u_r, v_i \geq \varepsilon \quad r = 1, \ldots, s \quad i = 1, \ldots, m
\]

(Charnes et al., 1978)
DEA Model

\[ h_0 = \text{efficiency of the unit under assessment} \]

\[ u_r = \text{weight given to output } r \]

\[ y_{ro} = \text{amount of output } r \text{ for unit under assessment} \]

\[ v_i = \text{weight given to input } i \]

\[ x_{io} = \text{amount of input } i \text{ for unit under assessment} \]

\[ g_o = \text{efficiency of the unit under assessment} \]

\[ \omega_i = \text{weight given to input } i \text{ in the linear model} \]

\[ \mu_r = \text{weight given to output } r \text{ in the linear model} \]

(Charnes et al., 1978)
My Previous DEA works

Khadem Sameni, Melody, and Alex Landex. "Capacity Utilization in European Railways: Who is the fairest of them all?." *Transportation Research Board (TRB) 92nd Annual Meeting Transportation Research Board. Washington, DC.* 2013.

Conclusions

- There are challenges to use index numbers to compare safety performance of railways
- Data Envelopment Analysis can be promising for comparing safety performance
- More research is underway
Thank you
for your kind attention
