Data last updated: 2014-02-12
Select the records you want to export to RefWorks.

If you just want to export the selected records on this page, you may select "RefWorks" in this drop-down menu now.
If you want to select records from multiple search result pages first before exporting them, ...
When you have finished selecting records to export, click the Marked List link.
For bibliographic data, you can output summary data for all records using the "total records" view, or output more product-specific data from each listed database.

You can choose to export only summary data for all records OR to export database-specific data.

Let’s choose data to export from the complete list of database-specific data.
1. Select records to export

2. Select fields to include

- Author(s) / Editor(s)
- Title
- Source
- Conference Information
- Conference Sponsors
- Publisher Information
- Page Count
- Research Areas

*Selecting these items will increase the processing time.
3. Select **save to RefWorks** from this drop-down menu
If you are already logged in to RefWorks in another browser window, the import of references from Web of Science databases will start automatically.

If you aren't logged in to RefWorks, you'll be prompted to enter your login name and password.
The newly imported references have been put in the Last Imported Folder.

Select **Edit Imported References** if you want to add information about the source of the references to the records.
For some sources, some electronic source related information is automatically included by the data vendor and it will appear in these fields. You may edit the fields, if desired.
In this case, you may delete “Web of Knowledge” in the data source field (as the platform has changed its name) and enter **Web of Science** as the database instead.

You must click the **Save Changes** button before you view the "Last Imported Folder" if you want to save electronic source related information in the imported record(s).
These are the newly imported references. View each record to make sure all the fields are imported correctly. You may then put them in any folder you like.
