CS2313: COMPUTER PROGRAMMING

Effective Term
Semester A 2023/24

Part I Course Overview

Course Title
Computer Programming

Subject Code
CS - Computer Science

Course Number
2313

Academic Unit
Computer Science (CS)

College/School
College of Engineering (EG)

Course Duration
One Semester

Credit Units
3

Level
B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction
English

Medium of Assessment
English

Prerequisites
CS1103B Media Computing or CS1303 Introduction to Internet and Programming or equivalent

Precursors
Nil

Equivalent Courses

Exclusive Courses
CS1315 Introduction to Computer Programming
CS2310 Computer Programming
CS2311 Computer Programming
CS2315 Computer Programming
CS2360 Java Programming
Part II Course Details

Abstract
This course aims to equip the students with in-depth concepts and techniques of programming using a high-level object-oriented programming language and to develop practical skills in producing quality programs.

A1: Attitude
Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability
Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments
Demonstrate accomplishment of discovery/innovation/creativity through producing/constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

<td>2</td>
<td>Lab</td>
<td>The laboratory sessions are designed to enable the students to put theory into practice and be proficient in a programming language. The laboratory exercises consist of programming tasks and students can try out their programs using a common integrated development environment. Feedback will be given to students on their work.</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Assignments</td>
<td>The assignments are more challenging tasks compared with laboratory exercises. The students need to analyze the requirements and design programming solutions by applying and combining various techniques learnt from lectures and laboratory exercises. They are also required to implement their solutions as practical computer programs, and to explain their ideas/algorithms using suitable presentation methods (e.g. a report, flowchart, etc.).</td>
<td>2, 3, 4</td>
</tr>
<tr>
<td>4</td>
<td>Quiz</td>
<td>The quiz provides the students opportunities to reflect on their understanding of various programming concepts and problem-solving techniques. They are required to predict and explain the behaviour of programs involving various programming concepts and techniques, and develop and implement programs or program segments to solve problems.</td>
<td>1, 2, 3, 4</td>

Part III Other Information

Keyword Syllabus
Program design, development of algorithms, programming language, control structures, data types, multidimensional arrays, file I-O, recursion, pointers and dynamic data structures, object-based programming: data abstraction, classes, and the class library; programming style, program testing, exception handling.

Syllabus
- Computers and programming
  Hardware/software hierarchy, the computer as a multi-level language machine. The software development process.
  Program development environments.
- Programming techniques and the development of algorithms
  Algorithms, programming language, modular decomposition and procedural abstraction, automatic and dynamic variables, parameter-passing by reference and by value for atomic data, objects, and arrays, control structures, iteration, recursion, exception handling.
- Data structures
- Program development practice
  Professional programming styles. Program testing. Program documentation.
