CS3391: ADVANCED PROGRAMMING

Effective Term
Semester A 2022/23

Part I Course Overview

Course Title
Advanced Programming

Subject Code
CS - Computer Science

Course Number
3391

Academic Unit
Computer Science (CS)

College/School
College of Engineering (EG)

Course Duration
One Semester

Credit Units
3

Level
B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction
English

Medium of Assessment
English

Prerequisites
CS2310 Computer Programming or
CS2311 Computer Programming or
CS2313 Computer Programming or equivalent

Precursors
Nil

Equivalent Courses
Nil

Exclusive Courses
Nil
Part II Course Details

Abstract
For many algorithmic problems found in practical systems, the best solutions are usually the elegant combinations of both efficient algorithms and advanced programming techniques. They are the results of some exciting blend of programming, mathematics and problem solving. The course introduces an interesting variety of subjects in programming, algorithms, and discrete mathematics through puzzles and practical problems so that students will have the chance to perform original discovery of new programming challenges and devise new ideas on solving the problems in an innovative way in terms of algorithms and programming techniques. The focus of this course is to help students develop advanced algorithmic and programming skills that are required to solve sophisticated problems in the real world. Due to the practicality of the problems which appear in many collegiate programming contests, we expect that the best students from this course will also be competent to solve competition-style programming problems and may be able to represent City University of Hong Kong at ACM Collegiate Programming contests.

Course Intended Learning Outcomes (CILOs)

<table>

</table>

A1: Attitude
Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability
Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments
Demonstrate accomplishment of discovery/innovation/creativity through producing/constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Teaching and Learning Activities (TLAs)

<table>
<thead>
<tr>
<th>TLAs</th>
<th>Brief Description</th>
<th>CILO No.</th>
<th>Hours/week (if applicable)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Lecture</td>
<td>1</td>
<td>3 hours/week</td>

<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>2</td>
<td>Lab</td>
<td>Students can create new ideas and invent new approaches on designing algorithms and computer codes to solve programming problems during the laboratory sessions. In the laboratory sessions, sets of problems are given to students. The students can learn how to analyze the problems and devise strategies with optimal use of resources and time to solve the problems. Based on the algorithms and programming techniques proposed by students or given by instructors, students spend the laboratory sessions to instantiate the algorithms by writing corresponding computer programs. In regular laboratory sessions, students tackle programming problems in teams. Various team formations will be arranged so that students can work with different individuals, so to generate new approaches on enhancing team programming and problem solving techniques.</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Assignments</td>
<td>Take-home assignments also help students improve their proficiency on various programming techniques.</td>
<td>2</td>
</tr>
<tr>
<td>4</td>
<td>Quiz</td>
<td>Students will compete with each other and try to finish as many problems as possible within a limited period of time.</td>
<td>3</td>
</tr>
</tbody>
</table>
Assessment Tasks / Activities (ATs)

</tbody>
</table>

Continuous Assessment (%)  
60

Examination (%)  
40

Examination Duration (Hours)  
3

Additional Information for ATs  
For a student to pass the course, at least 30% of the maximum mark for the examination must be obtained.

Assessment Rubrics (AR)

Assessment Task  
Assignments

Criterion  
ABILITY to SOLVE questions using the techniques learned in the lectures

Excellent (A+, A, A-)
High

Good (B+, B, B-)
Significant

Fair (C+, C, C-)
Moderate

Marginal (D)
Basic

Failure (F)
Not even reaching marginal levels

Assessment Task  
Quiz

Criterion  
ABILITY to solve problems under time pressure and group collaboration

Excellent (A+, A, A-)
High

Good (B+, B, B-)
Significant
Fair (C+, C, C-)
Moderate
Marginal (D)
Basic
Failure (F)
Not even reaching marginal levels

Assessment Task
Examination
Criterion
ABILITY to solve problems for different topics under time pressure
Excellent (A+, A, A-)
High
Good (B+, B, B-)
Significant
Fair (C+, C, C-)
Moderate
Marginal (D)
Basic
Failure (F)
Not even reaching marginal levels

Part III Other Information

Keyword Syllabus
Standard libraries in C and C++; C and C++ input and output processing; Recursion; Dynamic programming; Parsing;
Graph algorithms; Strings; Search algorithms; Simulation problems; Spanning trees; Sets; Shortest path; Maximum flow;
Computational geometry; Arithmetic, Algebra and number theory; Greedy and enumeration algorithms.
