Faculty Achievement

Department of Mechanical Engineering

Dr. Zhang received the ASME Best Paper Award for his work on developing a novel material for structural applications. His research, published in the journal Nature Communications, has significant implications for the design and construction of buildings and infrastructure. Dr. Zhang's work has been recognized for its innovative approach and has received widespread attention from the scientific community.

Student Achievement

Department of Civil and Environmental Engineering

Students from the Department of Civil and Environmental Engineering have been named as finalists in the National Civil Engineering Competition 2022 for their research on sustainable building materials. The project focuses on developing eco-friendly materials that can be used in construction, contributing to the goal of reducing the environmental impact of the building industry.

Student Achievement

Department of Electrical Engineering

Mr. Li received the Outstanding Final Year Dissertation Award from the Hong Kong Institute of Surveyors. His dissertation, titled "Ultra-Tough 3D Architected Hybrid Carbon Metamaterial", explores the development of new materials with enhanced mechanical properties. The findings have been published in the journal Matter, offering new possibilities for applications in various fields such as medicine and aerospace.

Faculty Achievement

Department of Mechanical Engineering

Dr. Zhang has been awarded the ASME Best Paper Award for his research on the application of innovative materials in structural engineering. His work has been recognized for its potential to revolutionize the construction industry and has received significant attention from both academia and industry.
