For generations, engineering professionals have played a vital and significant role in the advancement of our society, serving it by helping to build or manufacture practical and high-quality infrastructures or daily necessities that benefit our city and everyone living in it. The vision for Hong Kong as unveiled in various SAR Government’s initiatives are fuelling an unprecedented need for more young talents to join the engineering profession to support the impending development of our city meeting the imminent public demand.

There is thus a very promising future for this vital and noble profession.

The Hong Kong Institution of Engineers (HKIE) is organising a series of seminar for university students where the HKIE President Ir Aaron BOK will present the current and planned infrastructure projects or developments as well as engineering career opportunities in Hong Kong. Ir BOK would share with aspiring engineering students the exciting and exhilarating engineering stories of Hong Kong, and answer questions on embarking on an engineering career. Students and recent graduates interested in working towards being a professional engineer are welcome.

**HKIE TALK:**
**FROM STUDENTS TO PROFESSIONALS**

**Speaker:**
Ir Aaron BOK  
President  
The Hong Kong Institution of Engineers
