Product Development Intern

We provide internship positions that involve a comprehensive entrepreneurship experience of a startup. Our team has been helping many organizations in Asia to realize the benefits brought by the latest technologies.

The selected candidate will be at the core of product development of an EdTech product that would change people’s way of teaching and learning. The selected candidate is eager to learn and curious to solve business problems through designing, prototyping, developing and deploying software products or systems that benefit parents and schools. He/She will also be able to present work products and will be exposed to clients.

Join us if you are:

- Excited and looking forward to the next stage of technology innovation
- Passionate in latest technologies and striving to make a difference with the aid of Artificial Intelligence (AI) and Educational Technology (EdTech)
- Passionate about product development (e.g. mobile apps), AI, EdTech, data,
- Interested in making an impact on the society and clients, launching disruptive products and innovative user experience
- Keen to perform and achieve more

We are looking for a talented intern with the following skills:

- Bachelor in Information System, Analytics, Engineering, AI or a related analytical field
- Outstanding record of academic achievement
- Looking for work experience in startups
- Extensive knowledge in mobile app products, familiarity with methodologies such as Agile / SDLC and experience in using technologies to answer business questions
- Experience with programming skills such as Python, Flutter, Objective C++ etc, additional programming language skills are a bonus
- Continuously striving for high performance
- Excellent problem solving and communication skills
- Ability to work both collaboratively and independently
