

Virtual Private Network (VPN) Connection Setup Guide for Mac OS X

This manual shows the procedures to set up a CityU VPN Client running on Mac OS X. You should have the following items before you can establish a VPN connection.

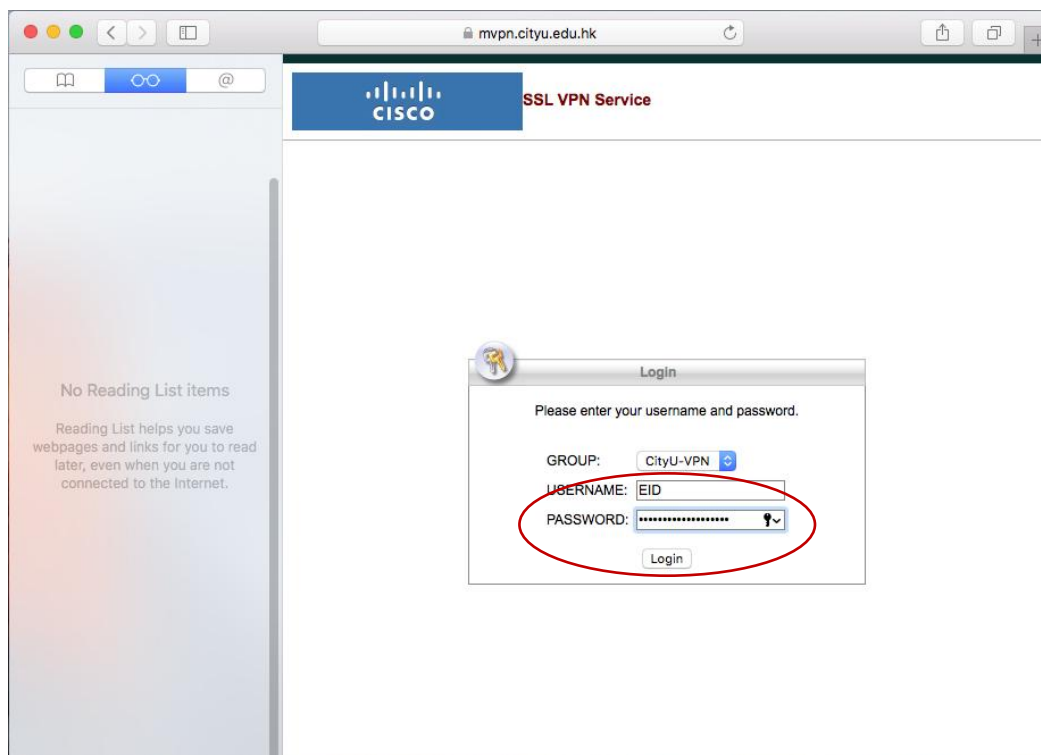

1. Internet connection such as your broadband or dial-up network
2. Network Connection Account and password

Step 1: Establish your Internet Connection

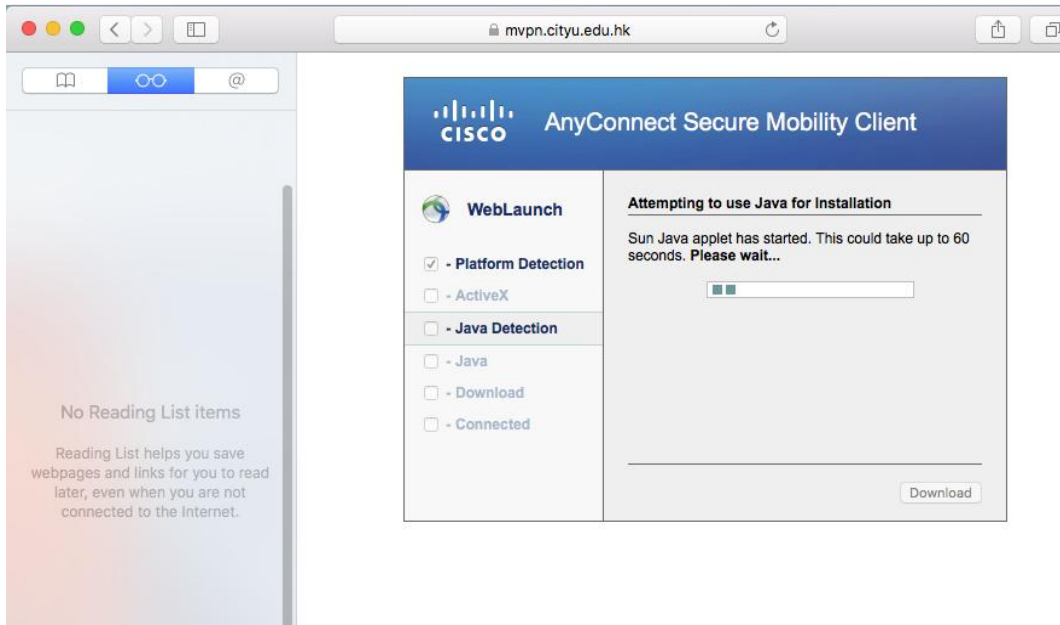

1. Apply your own Internet connection (such as broadband, 4G, etc.).
2. Follow the instructions provided by your ISP to setup your Internet connection. If you cannot access the Internet or having problems in setting your Internet connection, please consult your ISP.

Step 2: Install the Cisco AnyConnect VPN Client

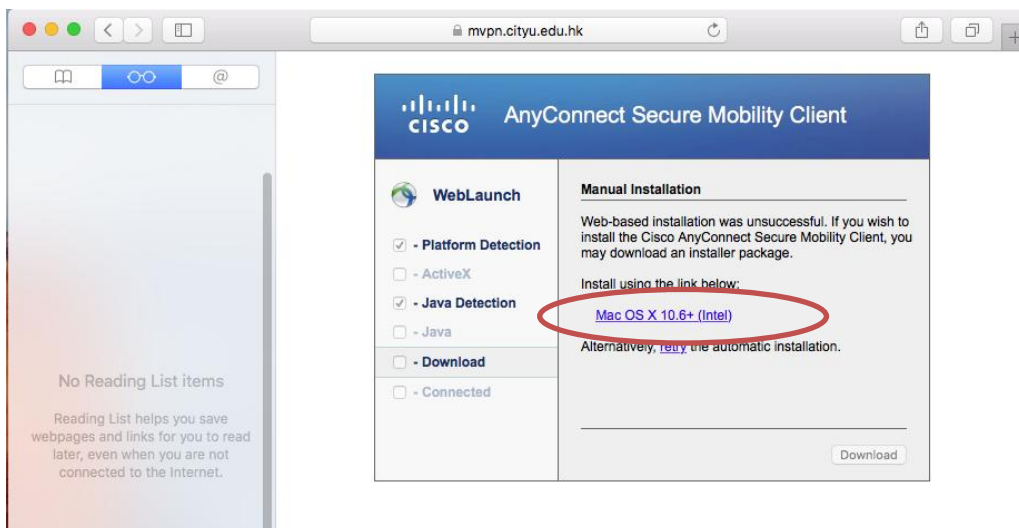

1. Use any web browser to access the URL "https://mvpn.cityu.edu.hk". You will be promoted for your username and password:

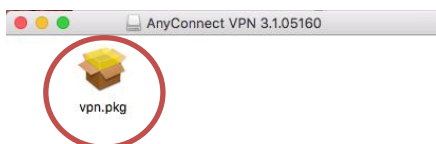

2. After successful login, the computer will try to identify and install the most appropriate AnyConnect VPN client:

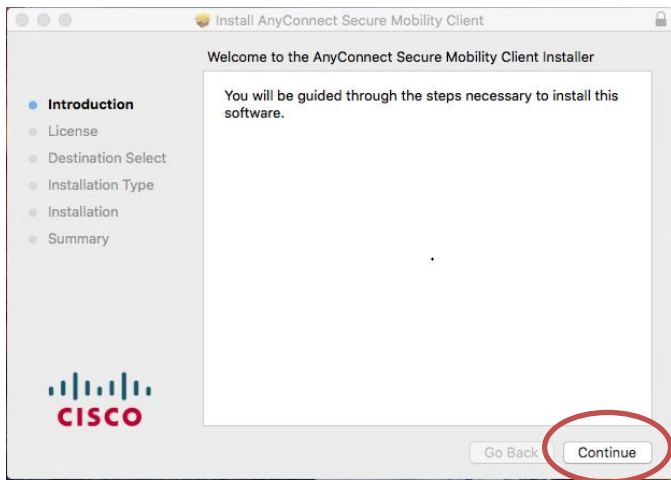

In case the web-based installation was unsuccessful, you may press the “Mac OS X 10.6+ (Intel)” link to download the VPN client manually:

Double click the downloaded package “vpn.pkg” to install the AnyConnect VPN client:

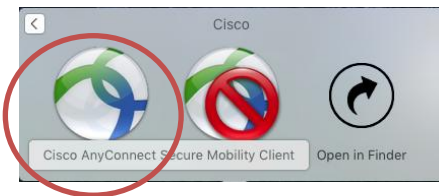

Press the “Continue” button and follow the on screen instructions to complete the installation:

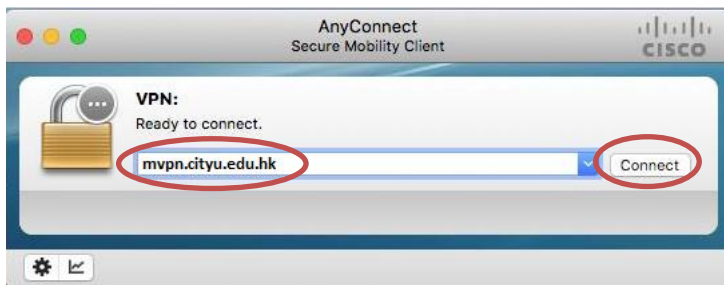

Step 3: Establish VPN connection

1. Launch the "Cisco AnyConnect Secure Mobility Client":

2. Connect to the CityU VPN server "mvpn.cityu.edu.hk":

4. Enter your EID and the network connection password to establish VPN connection:
