

## Connecting android device to “CityU Alumni” wireless network

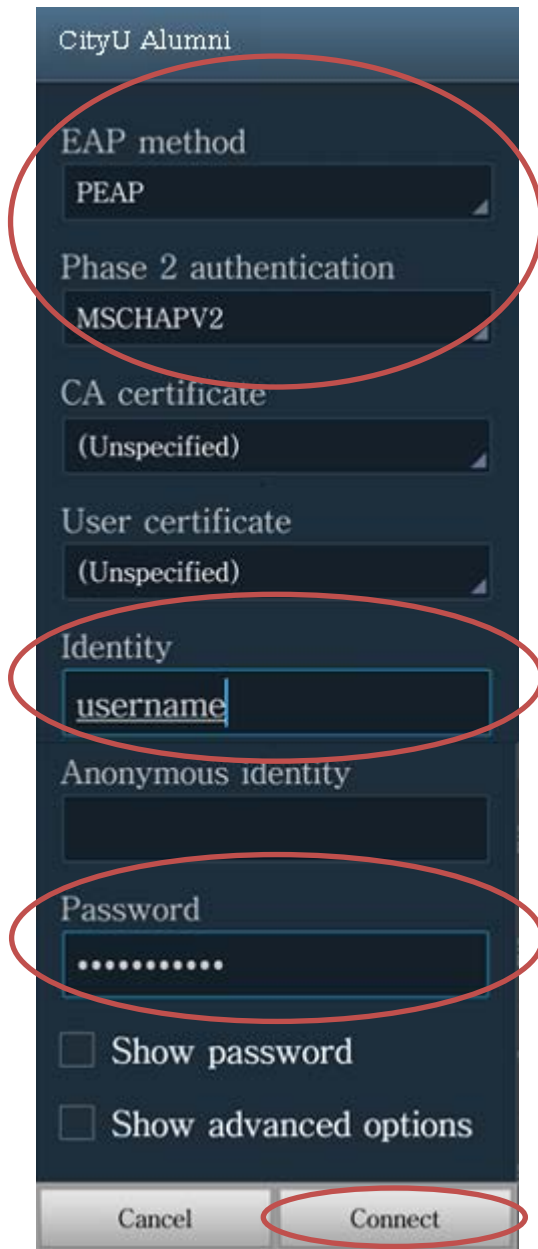

- a) Tap “Home” and select **"Settings"** icon 
- b) Select and turn on “Wi-Fi” to list the available wireless networks in range.

- c) Select the "CityU Alumni" network.

- d) Wait until you see the configuration window and select/enter the following connection parameters:

Press “Connect” to continue.

e) You can now access the Internet upon successful logon.

## Prioritize Wireless Network Connections – Android devices

- By default, if 3G/4G network connection is enabled, it will be the primary network connection once the device is turned on.
- 3G/4G data connection can be turned off explicitly, or by using “Flight mode”.
- When Wi-Fi is turned on, your device will try to connect to the most recently used Wi-Fi network (“remembered” network). If the most recently used network is not available (turn off or out of range), it will try to look for the second last one, so and so forth.

- When Wi-Fi is successfully connected, the data transfer will be done by Wi-Fi instead of 3G/4G.
- Wi-Fi connection is still available even the device is in “Flight mode” which you may wish to turn off when Wi-Fi connect is not desired, e.g. in aircraft, save cost, save battery life.
