Setup Guide for MacBook

Step 1: Disable Internet Sharing

There is a useful feature in Mac OS X that allows you to share your Internet connection. However, it will create serious network security problems and will interfere with other users in our campus network. Therefore, it is strongly recommended to turn off the "Internet Sharing" of your MacBook before connecting it to the CityU wireless network.

Step 2: Connecting to "eduroam"

a) Click on the "Wireless Network icon" to list the available wireless networks in range and then select the "eduroam" network.

b) Wait until you see the logon window to prompt you for the login name and password. Enter your EID plus "@cityu.edu.hk" (i.e. "EID@cityu.edu.hk") and network connection password to login. You can now access the Internet upon successful logon.
