## Creating Corpus-Based Online Materials and Resources for GE 2 English Courses for Engineering & Other Technical Disciplines

**Project Number:** 6000339

**Principal Investigator:** Dr Martin WEISSER

**Grant Type:** TDG

**Abstract:**

This project aims at creating a set of online-based teaching materials in form of at least partially dynamic HTML pages and other corpus- and computer-based resources for the new GE 2 English course for Engineers. At the same time, every attempt will be made to keep the design of the course flexible, so as to be able to adapt it easily to other technical disciplines, such as Applied Physics, Computer Science, etc.
