Embodying Text: Teaching and learning in the digital humanities classroom with natural user interfaces

Project Number: 6000422

Principal Investigator: Dr David Robert GRUBER

Grant Type: TSG

Abstract:

To explain a movement in Digital Humanities toward understanding the constraints and affordances of a ubiquitous computing environment wherein bodies, machines and texts interact and overlap.

Since the English Department at City University is developing a new, innovative course entitled, "Digital Humanities in English Studies"—an initiative led by the PI for this grant—it seems appropriate to participate in this conversation about interactivity and to use such body-text engagements in the new course at City University.
