CLAPP (Collaborative Learning App)

Project Number: 6000437

Principal Investigator: Dr David Jhave JOHNSTON

Grant Type: TSG

Abstract:

CLAPP is a proposal for how to leverage the potential of mobile technology to increase concentration.

CLAPP proposes to give one projection screen to the students as a real-time commentary space, -- the foundation of this secondary screen is still locked to the lecture slides. Comments would occur directly over and attached to the lecture slides. Students would logon to that screen, leave comments, chat, and ask questions in a transparent shared networked space that would also be saved as an archive.
