Touching Sound - Discovering new aesthetics through tangible sound media

Project Number: 6000438

Principal Investigator: Mr Takuro Mizuta LIPPIT

Grant Type: TSG

Abstract:

With the advance of digital music technology we have the ability to capture, manipulate, distribute, and reproduce a once ephemeral phenomenon of sound. However, increasingly what we lack are intuitive interfaces and physical characteristics that we once so strongly associated with sound and music.

This project examine the unique relationship and tension between creativity and technology.
