Part II Course Details

1. Abstract

In the context of globalization, "entrepreneurial" city-regions have increasingly taken unconventional actions for accumulating global capital flows and their economic competitiveness. This course aims to grasp postmodern logic of global capitalism and spatial strategies for local economic development across Hong Kong and other major cities of the world. The advent of new technologies, new liberalism (labor market) policies, and multinational supply chains/business clusters are addressed as major driving forces to shape the new economic geography of contemporary city-regions, whereas urban design and regional planning are stressed as essential counter efforts to assure long-term economic competitiveness along with social justice, and environmental sustainability. A range of economic development strategies and international city cases are assessed, both quantitatively and qualitatively.

2. Course Intended Learning Outcomes (CILOs)
