

Course Syllabus

offered by Department of Economics and Finance
with effect from Semester A 2016 /17

Part I Course Overview

Course Title: Advanced Microeconomics

Course Code: EF8070

Course Duration: 1 semester (39 hours)

Credit Units: 3

Level: R8

Arts and Humanities

Proposed Area:
(for GE courses only)

Study of Societies, Social and Business Organisations

Science and Technology

Medium of Instruction: English

Medium of Assessment: English

Prerequisites:
(Course Code and Title) Nil

Precursors:
(Course Code and Title) Nil

Equivalent Courses:
(Course Code and Title) EF5471 Advanced Microeconomics

Exclusive Courses:
(Course Code and Title) Nil

Part II Course Details

1. Abstract

This course aims to provide students with a deep understanding of advanced microeconomics. Six to seven standard topics are covered. These include consumption theory, production theory, welfare economics, general equilibrium, and decision-making under uncertainty. In the process of studying these topics, the course will also equip students with tools and techniques that are currently used in many applied areas of modern economics such as industrial organization, international trade etc.

Also, Discovery and Innovation is encouraged through the application of the models and concepts of microeconomic theory in new and innovative real-life cases.

2. Course Intended Learning Outcomes (CILOs)

(CILOs state what the student is expected to be able to do at the end of the course according to a given standard of performance.)

No.	CILOs [#]	Weighting* (if applicable)	Discovery-enriched curriculum related learning outcomes (please tick where appropriate)		
			A1	A2	A3
1.	Have a good understanding of the basic concepts and models of modern microeconomic theory, and their real-life and business applications.	-	√	√	√
2.	Be able to correctly to identify and apply the concepts and models studied in class to analyze real-world issues, such as consumer's or producer's behavior in various strategic contexts, and make sound predictions using the tools of microeconomic theory.	-	√	√	√
3.	Finally, the students will be able to apply the tools and techniques studied in class to answer questions, not only specific to microeconomics, but in more general areas of interest to economists, such as industrial organization, international trade.	-	√	√	√
		-			

* If weighting is assigned to CILOs, they should add up to 100%.

[#] Please specify the alignment of CILOs to the Gateway Education Programme Intended Learning outcomes (PILOs) in Section A of Annex.

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to self-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

3. Teaching and Learning Activities (TLAs)

(TLAs designed to facilitate students' achievement of the CILOs.)

TLA	Brief Description	CILO No.			Hours/week (if applicable)
		1	2	3	
Lectures	Lectures will introduce the basic concepts and models. The presentation, whereas possible, will try to motivate and provide intuition for the concepts and models introduced. Students are encouraged to participate in discussion, and thus discover the underlying concepts by themselves in the process.	√	√	√	3 hours/week
Exercises	Exercises are given regularly with solutions. Not graded to avoid cheating. The main purpose of the problem sets is to deepen the understanding of the material presented in class. Occasionally, they will contain applications to some real-life economic issues, such as taxation, trade, etc. Innovative thinking is encouraged in answering the questions related to real-world economic applications.	√	√	√	-

4. Assessment Tasks/Activities (ATs)

(ATs are designed to assess how well the students achieve the CILOs.)

Assessment Tasks/Activities	CILO No.			Weighting*	Remarks
	1	2	3		
Continuous Assessment: <u>30</u> %					
Mid Term Examination	√	√	√	30%	
Examination: <u>70</u> % (duration: 3hours, if applicable)					
Final Examination	√	√	√	70%	
* The weightings should add up to 100%.				100%	

Students are required to pass both coursework and examination components in order to pass the course.

5. Assessment Rubrics

(Grading of student achievements is based on student performance in assessment tasks/activities with the following rubrics.)

Assessment Task	Criterion	Excellent (A+, A, A-)	Good (B+, B, B-)	Adequate (C+, C, C-)	Marginal (D)	Failure (F)
1. Mid Term Examination	Ability to apply the concepts, models, and techniques studied in class to analyze various economic and business problems.	High	Significant	Moderate	Basic	Not even reaching marginal levels
2. Final Examination	Ability to apply the concepts, models, and techniques studied in class to analyze various economic and business problems.	High	Significant	Moderate	Basic	Not even reaching marginal levels

Part III Other Information (more details can be provided separately in the teaching plan)

1. Keyword Syllabus

(An indication of the key topics of the course.)

Consumer Choice; Utility Maximization and Expenditure Minimization; Substitution Effect and Income Effect; Revealed Preference; Aggregation; Production Function; Profit Maximization and Cost Minimization; Exchange and the two Fundamental Theorems of Welfare Economics; General Equilibrium; Decision-Making under Uncertainty

2. Reading List

2.1 Compulsory Readings

(Compulsory readings can include books, book chapters, or journal/magazine articles. There are also collections of e-books, e-journals available from the CityU Library.)

Textbooks

1.	Jehle, G.A. and Reny, P.J. (2011). Advanced Microeconomic Theory. 3rd ed. Pearson.
2.	Kreps, D. (1990). A Course in Microeconomic Theory. Princeton University Press.
3.	Mas-Colell, A., Whinston, M.D. and Green, G. (1995). Microeconomic Theory. Oxford University Press.
4.	Silberberg, E. and Suen, W. (2000). The Structure of Economics: A Mathematical Analysis. 3rd ed. McGraw Hill.
5.	Varian, Hal. (1992). Microeconomic Analysis. 3rd ed. North Press.

Background reading

1.	Varian, Hal. (2014). Intermediate Microeconomics. A Modern Approach. 9th ed. North Press.
