

MA6622: STATISTICAL METHODS AND CALIBRATION IN FINANCE AND ACTUARIAL SCIENCE

Effective Term

Semester A 2026/27

Part I Course Overview

Course Title

Statistical Methods and Calibration in Finance and Actuarial Science

Subject Code

MA - Mathematics

Course Number

6622

Academic Unit

Mathematics (MA)

College/School

College of Science (SI)

Course Duration

One Semester

Credit Units

3

Level

P5, P6 - Postgraduate Degree

Medium of Instruction

English

Medium of Assessment

English

Prerequisites

Nil

Precursors

Nil

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

This course aims to

- introduce econometric theory and calibration methods applied to finance and insurance engineering, e.g. in implementation of interest rate models;
- provide up-to-date knowledge of econometrics and calibrations for financial and economic time series, with emphasis on theories, case studies and use of software;
- develop theory of relative-value and hedging progressively with a “financial engineering approach” ; and
- focus on specific aspects of pricing and hedging and with problems that a technical analyst or trader has to consider in practice.

Course Intended Learning Outcomes (CILOs)

CILOs		Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Implement econometric techniques in estimation and analysis of financial econometric models, including the Capital Asset Pricing Model.	15	x	x	
2	Apply advanced time series models to empirical analysis and forecasting of financial time series data.	25	x	x	x
3	Explain clearly the concept of value at risk with normal/lognormal returns and computation of which via Monte Carlo approach.	15	x	x	
4	Perform calibration methods in Black-Scholes model, binomial trees and one factor diffusion models.	15	x	x	x
5	Describe quantitative properties of option pricing and interest rate models, as well as other factor models in modelling fixed income securities.	15	x	x	
6	Apply calibration and computational techniques pertinent to the analysis of economic data in contemporary financial markets.	15	x	x	x

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs		Brief Description	CILO No.	Hours/week (if applicable)
1	Teaching	Learning through teaching is primarily based on lectures.	1, 2, 3, 4, 5, 6	39 hours in total
2	Take-home assignments	Learning through take-home assignments helps students implement mathematical and statistical techniques to analyze financial data as well as to calibrate models of computing interest rates and pricing derivative securities.	1, 2, 3, 4, 5, 6	After class
3	Project(s)	Learning through project(s) helps students apply more advanced statistical and calibration methods of quantitative finance to analyze real world financial data and derivatives products computationally.	6	After class

Assessment Tasks / Activities (ATs)

ATs		CILO No.	Weighting (%)	Remarks ("-" for nil entry)	Allow Use of GenAI?
1	Test	1, 2, 3	20	Questions are designed for the first part of the course to see how well students have learned methods of econometrics in analyzing pricing models and time series data, as well as analytical and computational approaches to value of risk.	No

2	Hand-in assignments	1, 2, 3, 4, 5, 6	10	These are skills based assessment which enables students to implement statistical and calibration methods in studying financial market models and financial time series data.	Yes
---	---------------------	------------------	----	---	-----

Continuous Assessment (%)

30

Examination (%)

70

Examination Duration (Hours)

3

Additional Information for ATs

30% Coursework

70% Examination (Duration: 3 hours, at the end of the semester)

Examination questions are designed to see how far students have achieved their intended learning outcomes. Questions will primarily be skills and understanding based to assess the student's versatility in statistical and calibration methods of finance and actuarial science.

Assessment Rubrics (AR)**Assessment Task**

1. Test (for students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter)

Criterion

Problem solving ability on financial and actuarial problems based on the statistical and calibration methods

Excellent

(A+, A, A-) Consistently demonstrates a thorough understanding of the statistical and calibration methods and can always apply the techniques to solve financial and actuarial problems

Good

(B+, B, B-) Adequately demonstrates an understanding of the statistical and calibration methods and can usually apply the techniques to solve financial and actuarial problems

Fair

(C+, C, C-) Demonstrates some understanding of the statistical and calibration methods and can sometimes apply the techniques to solve financial and actuarial problems

Marginal

(D) Demonstrates limited understanding of the statistical and calibration methods and can seldom apply the techniques to solve financial and actuarial problems

Failure

(F) Demonstrates little understanding of the statistical and calibration methods and can rarely or never apply the techniques to solve financial and actuarial problems

Assessment Task

2. Hand-in assignments (for students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter)

Criterion

Comprehensive understanding of statistic methods and calibration and computational techniques for financial problem

Excellent

(A+, A, A-) Consistently demonstrates a thorough understanding of the statistical and calibration methods and can always apply the techniques to solve financial and actuarial problems

Good

(B+, B, B-) Adequately demonstrates an understanding of the statistical and calibration methods and can usually apply the techniques to solve financial and actuarial problems

Fair

(C+, C, C-) Demonstrates some understanding of the statistical and calibration methods and can sometimes apply the techniques to solve financial and actuarial problems

Marginal

(D) Demonstrates limited understanding of the statistical and calibration methods and can seldom apply the techniques to solve financial and actuarial problems

Failure

(F) Demonstrates little understanding of the statistical and calibration methods and can rarely or never apply the techniques to solve financial and actuarial problems

Assessment Task

3. Examination (for students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter)

Criterion

Creativity and problem solving ability based on comprehensive understanding

Excellent

(A+, A, A-) Consistently demonstrates a thorough understanding of the statistical and calibration methods and can always apply the techniques to solve financial and actuarial problems

Good

(B+, B, B-) Adequately demonstrates an understanding of the statistical and calibration methods and can usually apply the techniques to solve financial and actuarial problems

Fair

(C+, C, C-) Demonstrates some understanding of the statistical and calibration methods and can sometimes apply the techniques to solve financial and actuarial problems

Marginal

(D) Demonstrates limited understanding of the statistical and calibration methods and can seldom apply the techniques to solve financial and actuarial problems

Failure

(F) Demonstrates little understanding of the statistical and calibration methods and can rarely or never apply the techniques to solve financial and actuarial problems

Assessment Task

1. Test (for students admitted from Semester A 2022/23 to Summer Term 2024)

Criterion

Problem solving ability on financial and actuarial problems based on the statistical and calibration methods

Excellent

(A+, A, A-) Consistently demonstrates a thorough understanding of the statistical and calibration methods and can always apply the techniques to solve financial and actuarial problems

Good

(B+, B) Adequately demonstrates an understanding of the statistical and calibration methods and can usually apply the techniques to solve financial and actuarial problems

Marginal

(B-, C+, C) Demonstrates some understanding of the statistical and calibration methods and can sometimes apply the techniques to solve financial and actuarial problems

Failure

(F) Demonstrates little understanding of the statistical and calibration methods and can rarely or never apply the techniques to solve financial and actuarial problems

Assessment Task

2. Hand-in assignments (for students admitted from Semester A 2022/23 to Summer Term 2024)

Criterion

Comprehensive understanding of statistic methods and calibration and computational techniques for financial problem

Excellent

(A+, A, A-) Consistently demonstrates a thorough understanding of the statistical and calibration methods and can always apply the techniques to solve financial and actuarial problems

Good

(B+, B) Adequately demonstrates an understanding of the statistical and calibration methods and can usually apply the techniques to solve financial and actuarial problems

Marginal

(B-, C+, C) Demonstrates some understanding of the statistical and calibration methods and can sometimes apply the techniques to solve financial and actuarial problems

Failure

(F) Demonstrates little understanding of the statistical and calibration methods and can rarely or never apply the techniques to solve financial and actuarial problems

Assessment Task

3. Examination dents admitted from Semester A 2022/23 to Summer Term 2024)

Criterion

Creativity and problem solving ability based on comprehensive understanding

Excellent

(A+, A, A-) Consistently demonstrates a thorough understanding of the statistical and calibration methods and can always apply the techniques to solve financial and actuarial problems

Good

(B+, B) Adequately demonstrates an understanding of the statistical and calibration methods and can usually apply the techniques to solve financial and actuarial problems

Marginal

(B-, C+, C) Demonstrates some understanding of the statistical and calibration methods and can sometimes apply the techniques to solve financial and actuarial problems

Failure

(F) Demonstrates little understanding of the statistical and calibration methods and can rarely or never apply the techniques to solve financial and actuarial problems

Part III Other Information

Keyword Syllabus

Econometrics theory. The Capital Asset Pricing Model: the econometrics of financial markets, calibration of market models.

Reading List**Compulsory Readings**

Title	
1	Analysis of Financial Time Series, by Ruey S. Tsay, Wiley; 3rd edition
2	Monte Carlo Methods in Financial Engineering, by Paul Glasserman, Springer; 2003rd edition
3	The Volatility Surface, by Jim Gatheral, Wiley; 1st edition
4	Options, Futures, and other derivatives, by John C. Hull, Pearson; 9th edition
5	Interest Rate Modelling, by Leif Andersen and Vladimir Piterbarg, Atlantic Financial Press, 2010
6	Numerical Recipes, by William H. Press et al., Cambridge University Press; 3rd edition

Additional Readings

Title	
1	Nil
