

MS6712: CONTEMPORARY TOPICS IN QUANTITATIVE ANALYSIS FOR BUSINESS

Effective Term

Semester B 2024/25

Part I Course Overview

Course Title

Contemporary Topics in Quantitative Analysis for Business

Subject Code

MS - Decision Analytics and Operations

Course Number

6712

Academic Unit

Decision Analytics and Operations (DAOS)

College/School

College of Business (CB)

Course Duration

One Semester

Credit Units

3

Level

P5, P6 - Postgraduate Degree

Medium of Instruction

English

Medium of Assessment

English

Prerequisites

Nil

Precursors

MS5212 Statistical Methods I and MS5213 Statistical Methods II or MS5217 Statistical Data Analysis and MS5218 Applied Linear Statistical Models

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

This course aims to extend the knowledge of students in the use of quantitative analysis and to further develop students the practical skills of some advanced quantitative techniques for business decision problems.

Course Intended Learning Outcomes (CILOs)

CILOs		Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Understand the theories and principles of some advanced quantitative techniques for business decision making.	50	x	x	
2	Apply these techniques to solve real life problems.	50		x	x

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs	Brief Description	CILO No.	Hours/week (if applicable)
1	Lectures	Students will understand the concepts and statistical properties of the quantitative techniques and their relevance to business. The strengths and weaknesses of the techniques, and how they can be used to tackle different business problems are discussed in details. Case studies and examples are used to illustrate the quantitative techniques in practice. There will also be opportunities for peer interactions in the lectures through group discussions.	1, 2 2 hours / week

2	Group Discussions & Presentation	Students will have group discussions on major issues in class. Team members take turns to present the contents.	1, 2	1 hour / week
---	----------------------------------	---	------	---------------

Assessment Tasks / Activities (ATs)

ATs	CILO No.	Weighting (%)	Remarks (e.g. Parameter for GenAI use)
1	Assignments, or cases report	1, 2	30
2	Project	1, 2	30

Continuous Assessment (%)

60

Examination (%)

40

Examination Duration (Hours)

3

Additional Information for ATs

Examination: CILO No. 1,2.

Assessment Rubrics (AR)**Assessment Task**

Assignments, or cases report (for students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter)

Criterion

Core concepts and ideas; use of appropriate statistical methods

Excellent

(A+, A, A-) Strong evidence of knowing how to apply the key concepts and techniques, and to use computer software in performing data analysis

Good

(B+, B, B-) Evidence of knowing how to apply the key concepts and techniques, and to use computer software in performing data analysis

Fair

(C+, C, C-) Some evidence of knowing how to apply the key concepts and techniques, and to use computer software in performing data analysis

Marginal

(D) Sufficient familiarity with the subject matter to enable the student to progress without repeating the assignment

Failure

(F) Little evidence of familiarity with the subject matter

Assessment Task

Project (for students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter)

Criterion

Ability in using the appropriate statistical methods to solve the business problem

Excellent

(A+, A, A-) Strong evidence of original thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge base

Good

(B+, B, B-) Evidence of original thinking, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with literature

Fair

(C+, C, C-) Little evidence of original thinking, little evidence of critical capacity and analytic ability; reasonable understanding of issues

Marginal

(D) Sufficient familiarity with the subject matter to enable the student to progress without repeating the project report

Failure

(F) Little evidence of familiarity with the subject matter; weakness in critical and analytic skills; limited or irrelevant use of literature

Assessment Task

Examination (for students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter)

Criterion

Core concepts and ideas; use of appropriate statistical methods

Excellent

(A+, A, A-) Strong evidence of original thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge base

Good

(B+, B, B-) Some evidence of original thinking, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with literature

Fair

(C+, C, C-) Student who is profiting from the university experience; understanding of the subject; ability to develop solutions to simple problems in the material

Marginal

(D) Sufficient familiarity with the subject matter to enable the student to progress without repeating the course

Failure

(F) Little evidence of familiarity with the subject matter; weakness in critical and analytic skills; limited or irrelevant use of literature

Assessment Task

Assignments, or cases report (for students admitted from Semester A 2022/23 to Summer Term 2024)

Criterion

Core concepts and ideas; use of appropriate statistical methods

Excellent

(A+, A, A-) Strong evidence of knowing how to apply the key concepts and techniques, and to use computer software in performing data analysis

Good

(B+, B) Evidence of knowing how to apply the key concepts and techniques, and to use computer software in performing data analysis

Marginal

(B-, C+, C) Some evidence of knowing how to apply the key concepts and techniques, and to use computer software in performing data analysis

Failure

(F) Little evidence of familiarity with the subject matter

Assessment Task

Project (for students admitted from Semester A 2022/23 to Summer Term 2024)

Criterion

Ability in using the appropriate statistical methods to solve the business problem

Excellent

(A+, A, A-) Strong evidence of original thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge base

Good

(B+, B) Evidence of original thinking, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with literature

Marginal

(B-, C+, C) Little evidence of original thinking, little evidence of critical capacity and analytic ability; reasonable understanding of issues

Failure

(F) Little evidence of familiarity with the subject matter; weakness in critical and analytic skills; limited or irrelevant use of literature

Assessment Task

Examination (for students admitted from Semester A 2022/23 to Summer Term 2024)

Criterion

Core concepts and ideas; use of appropriate statistical methods

Excellent

(A+, A, A-) Strong evidence of original thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge base

Good

(B+, B) Some evidence of original thinking, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with literature

Marginal

(B-, C+, C) Student who is profiting from the university experience; understanding of the subject; ability to develop solutions to simple problems in the material

Failure

(F) Little evidence of familiarity with the subject matter; weakness in critical and analytic skills; limited or irrelevant use of literature

Part III Other Information

Keyword Syllabus

Students in the programme so far follow a programme made up of well-defined syllabuses. In order to make provision for contemporary topics which are of special interest to the students, this course provides an opportunity for students to select a range of topics for study. These topics will include some contemporary advanced quantitative techniques which are either not treated in the general curricula or not dealt with in sufficient detail or are the specialties of visiting scholars. The content would be designed according to the training of the students so that they will have sufficient background to take the course. Likely topics are listed as follows. The topics offered each year depend on student interests and staff availability.

1. Quantitative Analysis in the Real Estate Market

In the past decade, the financial analysis of real estate and the real estate market have become more sophisticated. This is due to a greater degree of integration between real estate and the broader economy. The new spirit of cooperation has changed the standard operating in real estate markets in two important ways. First, the analysis of income producing properties has become more systematic by adopting the tools of financial valuation rather than relying solely on experience. Second, new assets have been developed that have redefined the risks involved in real estate investment by securitizing the cash flows generated by real assets. The main objective of this topic is to introduce the fundamental concepts, principles, analytical methods and tools useful for making decision regarding real estate assets. Emphasis will be placed upon the use of the quantitative skills acquired in the programme to analyze behaviour of agents in the real estate. A firm understanding of real estate markets is essential to these analyses. Topics to be covered include characteristics of the real estate market, types of market activities, vacancy and absorption analysis, leasing and lease analysis, hedonic housing price modeling, determination of mortgage interest rates, mortgage payment pattern and loan calculation.

2. Structural Equations Models in Business

Structural equation modeling with latent variables is an integrated and powerful technique which includes many typical statistical methods such as path analysis, recursive models, classical econometrics and factor analysis. Structural equations models are particularly helpful in behavioral sciences and have been used to study the relationship between customers' social and economic characteristics and preferences, the determinants of firm profitability, discrimination in employment and other interesting mechanisms. Topics to be covered include latent variables and latent variable models, explanatory and confirmatory factor analysis, path analysis, causality and causal models, and LISREL models.

3. Statistical Reliability Models

With increasing intense competition and customer expectation, the key to success and survival of nowadays manufacturers is to produce high quality products. Improving reliability is an important part of the larger picture of improving product quality. Reliability is defined as the probability that a system or equipment will perform its intended function under given conditions for a specified period of time. In essence, reliability is quality over time. This topic will introduce some concepts and terminology in life tests and reliability; and to introduce statistical methods for the analysis of reliability data. Topics to be covered include: life time data, censoring, various probability distributions in reliability; accelerated life models; reliability and hazard rates, reliability modeling techniques for repairable system.
