## 1. **PROGRAMME AIMS**

The programme aims to produce data-analytic graduates to meet the growing demand for high-level data science skills and to prepare graduates to apply data science techniques to knowledge discovery and dissemination in organisational decision-making. It is also intended to help data analytic professionals upgrade their technical management and development skills, and to provide a solid path for students from related quantitative fields to rapidly transition to data science careers.

### **Programme Intended Learning Outcomes (PILOs):**

Upon successful completion of this Programme, students should be able to:

1. Apply knowledge of science and engineering appropriate to the data science discipline;
2. Understand the theoretical foundation of contemporary techniques and apply them for managing, mining and analysing data across multiple disciplines;
3. Comprehend computational tools and use data-driven thinking to discover new knowledge and to solve real-world problems with complex structures;
4. Recognise the need for and engage in continuous learning about emerging and innovative data science techniques and ideas;
5. Communicate ideas and findings in written, oral and visual forms and work in a diverse team environment.
