University Announcement

Notification on Emergency Response Unit (ERU) (58)

Concerning the dangerous chemical found on campus recently, the University immediately alerted the Fire Services Department and has been in contact with the relevant government departments and transferred the chemical to a safe place. The chemical had been handled by the Explosive Ordnance Disposal Bureau under safe circumstances yesterday (6 December).

This incident has developed rapidly and the power of the explosive was not high. Still, we regret for not being given timely preparation and have kept the University community informed well beforehand.
