University Announcement

Preliminary tested positive case of Covid-19 Notification from the Emergency Response Unit (ERU) (117)

The University was informed today (1 October) that a non-local student resident was preliminary tested positive for Covid-19. The student resident had completed the 14-day compulsory quarantine as requested by the Government off campus before the individual returned to the student hostel with no symptoms. However, the student was preliminary tested positive when the individual was asked to take another test by an internship company earlier and has been sent to hospital for further assessment.

The University will conduct comprehensive disinfection and cleaning following guidelines from the Centre for Health Protection in the affected campus and hostel areas. Student Residence Office will make the necessary arrangements as soon as possible, including contacting affected student residents and arranging for them to take a Covid-19 test.

We will continue to pay close attention to the situation, take all necessary steps and handle the situation carefully. Please be reminded that you should seek medical attention as soon as possible if you are feeling unwell.
