

MNE3115: MICROELECTROMECHANICAL SYSTEMS

Effective Term

Semester A 2025/26

Part I Course Overview

Course Title

Microelectromechanical Systems

Subject Code

MNE - Mechanical Engineering

Course Number

3115

Academic Unit

Mechanical Engineering (MNE)

College/School

College of Engineering (EG)

Course Duration

One Semester

Credit Units

3

Level

B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction

English

Medium of Assessment

English

Precursors

Nil

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

The aim of this course is to provide students with the understanding of the functioning and construction of micro-sensors and micro-actuators integrated into micro electro mechanical systems (MEMS). Students will learn about design and fabrication fundamentals for MEMS, including the on-chip implementations for sensors and actuators of micron-scale dimensions. Apart

from learning details of microstructure fabrication with the aid of microtooling, mechanics of silicon and thin-film materials will also be covered as well as principles of thermal micromechanics, electrostatic force, piezoresistivity, and capacitance-based detection of motion. Application examples will focus on micro-sensors (primarily of pressure and acceleration). Characteristics of some of these devices will be determined in laboratory experiments. Students will have the opportunity to discover and innovate in these domains.

Course Intended Learning Outcomes (CILOs)

CILOs	Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1 DESCRIBE the mechanics of silicon and thin-film materials, principles of thermal micromechanics, electrostatic force, piezoresistivity, and capacitance-based detection of motion.			x	
2 IDENTIFY key microstructures related to the MEMS functions and fabrication protocols.			x	
3 EVALUATE features of micro-transducers.			x	
4 DEVELOP MEMS systems using feasible sensing or/and actuation principles based on theoretical models and analysis of system characteristics for optimal system performance.		x	x	x

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs	Brief Description	CILO No.	Hours/week (if applicable)
1 Lecture	Students will engage in formal lectures to gain knowledge about key concepts of MEMS.	1, 2, 3, 4	2 hrs/week
2 Tutorial / Group Presentation	Students will engage in tutorial activities and participate in group presentations.	2, 3, 4	1 hr/week

3	Laboratory Work	Students will engage in laboratory work that will be group activity requiring teamwork. The group activities will emphasise opportunities for discovering key concepts in microfabrication and MEMS design.	3, 4	3 hrs/week for two weeks
---	-----------------	---	------	--------------------------

Assessment Tasks / Activities (ATs)

	ATs	CILO No.	Weighting (%)	Remarks ("- " for nil entry)	Allow Use of GenAI?
1	Test	1, 2	20	20% marks, 1.5 hours	No
2	Laboratory Reports	3, 4	10	Lab reports to be submitted	Yes
3	Group Presentation	2, 3, 4	20	Group presentations on selected topic.	Yes

Continuous Assessment (%)

50

Examination (%)

50

Examination Duration (Hours)

2

Minimum Continuous Assessment Passing Requirement (%)

30

Minimum Examination Passing Requirement (%)

30

Additional Information for ATs

For a student to pass the course, at least 30% of the maximum mark for both coursework and examination should be obtained.

Assessment Rubrics (AR)**Assessment Task**

Laboratory Reports

Criterion

Ability to explain the methodology and procedure, analyse the experimental data, and discuss the experimental findings.

Excellent (A+, A, A-)

Strong evidence of critical thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge of the experimental matters concerned.

Good (B+, B, B-)

Evidence of grasp of subject, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with experiment.

Fair (C+, C, C-)

Student who is profiting from the laboratory class; understanding of the subject; ability to develop solutions to concerning the experiment.

Marginal (D)

Sufficient familiarity with the laboratory content to enable the student to move onto other laboratory materials.

Failure (F)

Little evidence of familiarity with the laboratory class materials; weakness in critical and analytic skills; limited, or irrelevant use of data.

Assessment Task

Group Presentation

Criterion

Make group presentations on selected topic to demonstrate discovery learning.

Excellent (A+, A, A-)

Strong evidence of original thinking; excellent organization; evidence of extensive knowledge; excellent presentation skill.

Good (B+, B, B-)

Significant evidence of original thinking; good organization; evidence of extensive knowledge; good presentation skill.

Fair (C+, C, C-)

Fair evidence of original thinking; fair organization; evidence of knowledge; fair presentation skill.

Marginal (D)

Some evidence of original thinking; poor organization; poor presentation skill.

Failure (F)

Little evidence of original thinking; very poor organization; very poor presentation skill.

Assessment Task

Test

Criterion

Apply the concepts of MEMS to solve problems and answer the questions correctly and properly.

Excellent (A+, A, A-)

Strong evidence of original thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge base.

Good (B+, B, B-)

Significant evidence of grasp of subject, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with course matter.

Fair (C+, C, C-)

Student is profiting from the university experience; understanding of MEMS; ability to develop solutions to simple problems in the course.

Marginal (D)

Basic familiarity with the subject matter to enable the student to progress without repeating the course.

Failure (F)

Little evidence of familiarity with the subject matter; weakness in critical and analytic skills; very limited demonstration of correct use knowledge in MEMS.

Assessment Task

Examination

Criterion

Ability to explain the methodology and procedure related to microfabrication, and to design and model MEMS.

Excellent (A+, A, A-)

Strong evidence of original thinking; good organization, capacity to analyse and synthesize; superior grasp of subject matter; evidence of extensive knowledge base.

Good (B+, B, B-)

Significant evidence of grasp of subject, some evidence of critical capacity and analytic ability; reasonable understanding of issues; evidence of familiarity with course matter.

Fair (C+, C, C-)

Student is profiting from the university experience; understanding of MEMS; ability to develop solutions to simple problems in the course.

Marginal (D)

Basic familiarity with the subject matter to enable the student to progress without repeating the course.

Failure (F)

Little evidence of familiarity with the subject matter; weakness in critical and analytic skills; very limited demonstration of correct use knowledge in MEMS.

Additional Information for AR

Note: For a student to pass the course, at least 30% of the maximum mark for both coursework and examination should be obtained.

Part III Other Information**Keyword Syllabus**

Micro-sensors, micro-actuators, and micro electro mechanical systems (MEMS); design and fabrication for MEMS, on-chip implementations; microtooling; mechanics of silicon and thin-film materials, thermal micromechanics, electrostatic force, piezoresistivity, and capacitance-based detection of motion; micro-mirror displays and semiconductor and optical micro-sensors.
