

CS4286: INTERNET SECURITY AND E-COMMERCE PROTOCOLS

Effective Term

Semester A 2025/26

Part I Course Overview

Course Title

Internet Security and e-Commerce Protocols

Subject Code

CS - Computer Science

Course Number

4286

Academic Unit

Computer Science (CS)

College/School

College of Computing (CC)

Course Duration

One Semester

Credit Units

3

Level

B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction

English

Medium of Assessment

English

Prerequisites

CS3201 Computer Networks or
CHEM2808 Forensics and Modern Society or
CHEM2809 Science Versus Crime
(For students intending to take a Minor in Forensic Studies)
or equivalent

Precursors

Nil

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

This course aims to provide an understanding of information security. Students are expected to gain a broad understanding of information security with the goal of recognising security problems and discovering the security requirements of current computer systems. The course explores existing security mechanisms and offers students the opportunity to evaluate and design techniques for enforcing computer and network security and developing secure e-commerce protocols.

Course Intended Learning Outcomes (CILOs)

CILOs		Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Identify and explain the security requirements of various security systems.		x	x	
2	Describe the security of systems and various threats and apply knowledge to identify potential security problems in online services and communications.		x	x	
3	Critique and design secure e-commerce protocols or systems using cryptographic algorithms and protocols.			x	
4	Explain and evaluate the security and performance of security algorithms and protocols, and e-commerce systems.		x	x	

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs		Brief Description	CILO No.	Hours/week (if applicable)
1	Lectures	Students will engage with key topics of information security. Additional examples and case studies will be discussed.	1, 2, 3, 4	3 hours/week
2	Tutorials	Students will work on problems and exercises to reinforce understanding of the topics taught in lectures.	1, 2, 3, 4	8 hours/semester

3	Assignments	Students will apply course concepts to explain and evaluate security systems and algorithm. Some problems could provide the opportunity to further discover how current secure systems operate.	1, 2, 3, 4	After class
4	Quiz	Students will apply course concepts to solve selected theoretical and practical problems.	1, 2, 3, 4	

Assessment Tasks / Activities (ATs)

ATs		CILO No.	Weighting (%)	Remarks ("- for nil entry)	Allow Use of GenAI?
1	Assignments	1, 2, 3, 4	20	3 Problem Sets	Yes
2	Mid-term Test	1, 2, 3, 4	10	-	No

Continuous Assessment (%)

30

Examination (%)

70

Examination Duration (Hours)

2

Minimum Examination Passing Requirement (%)

30

Additional Information for ATs

For a student to pass the course, at least 30% of the maximum mark for the examination must be obtained.

Assessment Rubrics (AR)**Assessment Task**

Mid-term Test

Criterion

Ability to explain and apply information security principles

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Assessment Task

Assignments

Criterion

Exhibit understanding of information security principles in evaluating and designing secure systems

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Assessment Task

Assignments

Criterion

Demonstrate ability to engage with information security principles in real-world applications

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Assessment Task

Examination

Criterion

Ability to explain information security principles and also demonstrate the ability to evaluate and design aspects of secure systems

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Part III Other Information

Keyword Syllabus

A selection of topics from the following: network security, computer security, malicious software, access control, firewall, intrusion detection systems, classical cryptography, symmetric-key encryption, DES, AES, public key cryptography, digital signature, digital certificate, message authentication, hash functions, RSA, ECC, SHA-1, SHA-256, PKI, authentication and key establishment protocols, SSL, PEM, PGP, IPsec, IKE, e-cash, micropayment, SET, electronic voting, electronic auction, smart card, etc.

Syllabus

A selection of topics from the following:

- Network security and computer security
Basic notions and techniques of DDoS, phishing attacks, malicious software such as worms, Trojan horses and viruses, firewall, packet filtering, intrusion detection systems, access control mechanisms and related subjects.
- Cryptographic techniques
Classical cryptography, symmetric-key encryption, public key cryptography, digital signature, message authentication, cryptographic hash functions and some concrete algorithms such as DES, AES, RSA, ECC (Elliptic Curve Cryptosystems), SHA-1, SHA-256, HMAC.
- Security protocols and e-commerce protocols/schemes
Authentication protocols, password-based authentication, digital certificate, certificate authority, revocation schemes, IPsec, IKE, SET, SSL, e-cash, micropayment, blind signature
- Advanced cryptographic protocols and e-commerce systems
Electronic voting, electronic auction, payment servers, secret-sharing schemes, fair exchange of signatures for contract signing

Reading List

Compulsory Readings

Title	
1	Stallings W. (2013). Cryptography and Network Security: Principles and Practice. Prentice Hall. 6th edition.

Additional Readings

Title	
1	Stinson D. R. (2005). Cryptography - Theory and Practice. CRC Press, 3rd edition.
2	Anderson R. (2008). Security Engineering. Wiley, 2nd edition.
