

EE1004: FOUNDATIONS OF INFORMATION SYSTEMS AND DATA ANALYSIS

Effective Term

Semester A 2025/26

Part I Course Overview

Course Title

Foundations of Information Systems and Data Analysis

Subject Code

EE - Electrical Engineering

Course Number

1004

Academic Unit

Electrical Engineering (EE)

College/School

College of Engineering (EG)

Course Duration

One Semester

Credit Units

3

Level

B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction

English

Medium of Assessment

English

Prerequisites

Nil

Precursors

Nil

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

This course is designed to introduce the students to concepts, impacts, and basic principles of data and information systems. Applied examples will be introduced, analysed, solved. The laboratories of this course will cover introductory probability problems and statistics of real-life data, geometric transformation, and applications of eigenvalues and eigenvectors to data analysis.

Course Intended Learning Outcomes (CILOs)

CILOs		Weighting (if DEC-A1 DEC-A2 DEC-A3 app.)			
1	Explain mathematical concepts on topics of linear algebra, including vectors, matrices, linear equations, etc in engineering applications.		x	x	
2	Describe basic statistical methods in engineering applications.		x	x	
3	Describe engineering data modeling and random variables		x	x	
4	Analyze data using basic statistics and probability theories		x	x	

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs		Brief Description	CILO No.	Hours/week (if applicable)
1	Lecture	Students will engage in lectures on various fundamental knowledge and concepts in information systems	1, 2, 3, 4	3 hrs/wk
2	Laboratories	Students will engage in computational labs to reinforce key concepts covered in lectures and tutorials	1, 2, 3, 4	2 hrs/wk (3 weeks)

Assessment Tasks / Activities (ATs)

ATs		CILO No.	Weighting (%)	Remarks ("-" for nil entry)	Allow Use of GenAI?
1	Tests (min. 2) and short tests	1, 2, 3, 4	30	-	No

2	# Assignments and Lab Assignments (total: 5)	1, 2, 3, 4	20	-	Yes
---	--	------------	----	---	-----

Continuous Assessment (%)

50

Examination (%)

50

Examination Duration (Hours)

2

Minimum Continuous Assessment Passing Requirement (%)

30

Minimum Examination Passing Requirement (%)

30

Additional Information for ATs

Remark: To pass the course, students are required to achieve at least 30% in coursework and 30% in the examination. #may include homework, tutorial exercise, project/mini-project, presentation

Assessment Rubrics (AR)**Assessment Task**

Examination

Criterion

Achievements in CILOs

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Part III Other Information

Keyword SyllabusIntroduction to Data and Information Systems

Numerical and non-numerical data; Signals and images; Graphs: nodes, edges, adjacency matrix.

Basic Computational Engineering and Linear Algebra

Introduction to computational engineering and modeling of physical systems; Vectors: inner and outer products; Matrices: matrix multiplications, determinants, inverse of a matrix; System of linear equations; Eigenvector and Eigenvalues; Application to geometric image transformations.

Information System and Data Statistics and Probability

Introduction to modeling of information and engineering systems using basic statistics and probability; Summarizing data sets: measures of center and measures of variation; Sample space and events, basic laws of probability, conditional probability; Application to engineering problems.

Engineering Data Modeling and Random Variables

Introduction to Information and engineering systems data modeling; The ideas of summation and integration; probability mass function, probability density function, common random variables (e.g., binomial, Poisson, Gaussian), expectation and variance; Joint distribution functions, independent random variables, covariance, and correlation; Application to data modeling.

Basic Engineering Statistical Methods

Sampling distributions and basic point estimates, confidence intervals for a population mean; Hypothesis testing: the null and the alternative hypotheses, two types of errors, p values; Application to engineering data analysis.

Reading List**Compulsory Readings**

Title	
1	Erwin Kreyszig, Advanced Engineering Mathematics, 10th ed., Wiley, 2011

Additional Readings

Title
