

SEE4220: MEASUREMENTS OF AIR POLLUTANTS

Effective Term

Semester A 2025/26

Part I Course Overview

Course Title

Measurements of Air Pollutants

Subject Code

SEE - School of Energy and Environment

Course Number

4220

Academic Unit

School of Energy and Environment (E2)

College/School

School of Energy and Environment (E2)

Course Duration

One Semester

Credit Units

3

Level

B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction

English

Medium of Assessment

English

Prerequisites

SEE2002 Chemical Sciences for Energy and Environmental Engineers;
SEE2003 Introduction to Energy and Environmental Data Analysis; and
SEE3101 Engineering Thermofluids II

Precursors

BCH2004 OR CHEM2004 Principles of Analytical Chemistry

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

To introduce students to the principles of different instruments for the measurements of gaseous and particulate pollutants based on the Reference methods (USEPA approved methods) and advanced research methods. Students will learn the fundamental concepts in the design of instruments used in typical air quality monitoring stations (AQMS) and research facilities. In addition to introducing the techniques for assessing the criteria pollutants, we will put emphasis on measurements of various physical and chemical characteristics of particulate matters. Real time techniques will also be discussed.

Course Intended Learning Outcomes (CILOs)

CILOs		Weighting (if DEC-A1 DEC-A2 DEC-A3 app.)			
1	Explain the principles and limitations of the Reference methods used for criteria pollutants in AQMS	40	x	x	
2	Explain the principles and limitations of real time techniques for measurements of PM concentrations and their properties	40		x	
3	Evaluate the significance and the limitations of emerging technologies in air pollutant measurements	20		x	x

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs		Brief Description	CILO No.	Hours/week (if applicable)
1	Lectures	Students will engage in lecture activities about key concepts and principles related to air pollutant measurements and the design of instruments.	1, 2, 3	
2	Lab demonstrations	Students will visit research facilities of advanced instruments for measurements of air pollutants.	1, 2, 3	
3	Field trip	Students will visit to AQMS.	1, 2	

4	Project	Students will present a publication on the principle and/or application of a new technique.	1, 2, 3	
---	---------	---	---------	--

Assessment Tasks / Activities (ATs)

	ATs	CILO No.	Weighting (%)	Remarks ("- " for nil entry)	Allow Use of GenAI?
1	Assignments	1, 2, 3	15	-	Yes
2	Mid term	1, 2	30	-	No
3	Project	3	20	-	Yes

Continuous Assessment (%)

65

Examination (%)

35

Examination Duration (Hours)

2

Minimum Continuous Assessment Passing Requirement (%)

30

Minimum Examination Passing Requirement (%)

30

Additional Information for ATs

Examination duration: 2 hrs Percentage of continuous assessment, examination, etc.: 65% by continuous assessment; 35% by exam To pass a course, a student must do ALL of the following: 1) obtain at least 30% of the total marks allocated towards continuous assessment (combination of assignments, pop quizzes, term paper, lab reports and/ or quiz, if applicable); 2) obtain at least 30% of the total marks allocated towards final examination (if applicable); and 3) meet the criteria listed in the section on Assessment Rubrics.

Assessment Rubrics (AR)**Assessment Task**

1. Assignments

Criterion

Ability to explain concepts, analyze and solve problems related to measurements of air pollutants

Excellent (A+, A, A-)

Excellent understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Good (B+, B, B-)

Good understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Fair (C+, C, C-)

Acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Marginal (D)

Marginally acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Failure (F)

Poor understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Assessment Task

2. Mid term

Criterion

Ability to explain concepts, analyze and solve problems related to measurements of air pollutants

Excellent (A+, A, A-)

Excellent understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Good (B+, B, B-)

Good understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Fair (C+, C, C-)

Acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Marginal (D)

Marginally acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Failure (F)

Poor understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Assessment Task

3. Project

Criterion

Ability to explain concepts, analyze and solve problems related to measurements of air pollutants

Excellent (A+, A, A-)

Excellent understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Good (B+, B, B-)

Good understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Fair (C+, C, C-)

Acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Marginal (D)

Marginally acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Failure (F)

Poor understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Assessment Task

4. Examination

Criterion

Ability to explain concepts, analyze and solve problems related to measurements of air pollutants

Excellent (A+, A, A-)

Excellent understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Good (B+, B, B-)

Good understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Fair (C+, C, C-)

Acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Marginal (D)

Marginally acceptable understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Failure (F)

Poor understanding of concepts and ability to analyze and solve problems related to measurements of air pollutants

Part III Other Information**Keyword Syllabus**

- 1.0 Characteristics of Air Pollutants
- 2.0 Statistical Issues
- 3.0 General Air Sampling Techniques
- 4.0 Particulate Sampling
- 5.0 Denuder sampling techniques for semi-volatile particles
- 6.0 Direct Measurement Techniques of mass and number concentration of particles
- 7.0 Volatile Organic Compounds (VOC) and Chemical Composition Measurements of Particles
- 8.0 Real time Chemical Analysis of Ambient Particles
